

## **Title:** Introduction to Dental Ozone a Practical Workshop:

### **Course Description**

This day-long class will be divided into morning and afternoon sessions. The class is intended to provide sufficient theoretical and practical basis to qualify attendants to incorporate ozone in their practice.

Dentists, dental office administrators, dentist assistants and hygienists are welcome as Dr. Zaremski specializes in training teams. Dr. Zaremski's evaluations in previous Ozone Master Classes courses have been consistently stellar.

During the morning session, he will discuss the history, science of medical ozone, as well as its dental and medical applications. He will also discuss the different ways of ozone administration. The sales and billing details of ozone administration will be discussed. During the afternoon section of the course, Dr. Zaremski will lead a hands-on workshop that will teach the following skills:

### **Objectives:**

1. Hands on demonstration of operating an ozone generator.
2. Learn how to determine ozone concentration for different therapies.
3. Hands on application of ozone on models. Use of ozone trays.
4. Hands on injection into tissues.
5. Oxygen safety.

Specific clinical work will be discussed as it pertains to each of the above therapies. The course will provide opportunity for Q&A.
